

Sage on the Azure Cloud

at a glance

Accredited Partner

Successfully Run Your Sage Software Microsoft Azure

Choosing Sunesis Consulting to migrate Sage 50, Sage 300, Sage Evolution or Sage X3 means you get all of the benefits of the cloud and eliminate many of the drawbacks of on-premise accounting software.

Businesses worldwide are changing the way they deploy and consume software, moving away from on-premise applications to the more convenient and cost-effective cloud options. Small-to mid-sized enterprise businesses can now leverage the power of ERP and CRM workloads with hybrid and cloud-only deployments.

Running on-premises accounting software often attracts many challenges and the Sage software migration to Azure aims to address these challenges.

Minimum Requirements

- Azure Subscription
- Sage license
- SQL Server

Azure Cloud Server Specifications

- 1.2.0 GHz processor for single user and multiple users
- 2.4 GB of RAM for max of 4 users and 8 GB of RAM for more than 4 users

SOLUTION OVERVIEW

How we do it

1. Understand your current Sage setup.
2. Creation of a high level architectural design, roadmap & costing for moving Sage on-premises to Azure Cloud.
3. Understanding your needs for automated reports and dashboards from Sage using Microsoft Power BI.
4. Executing a Proof of Concept to validate technical feasibility and user experience from Sage on Azure.
5. Migration of Sage to Microsoft Azure.
6. Maintenance and support.

Key Benefits

Access centrally from anywhere as you also run fewer instances of Sage for the whole organisation.

No need to have multiple branch / country / outlets instances of Sage. Get real-time access to data and reduce manual consolidation efforts.

High Availability & Security

Azure is able to address many of your pain points. By hosting Sage on Azure servers and accessing it over the internet means there's no need to buy, set up, configure, or maintain dedicated Sage server hardware on your premises.

Get Real-time Business Insights from Sage

Backed by over 16 years of experience in building reports & dashboards using Microsoft Power BI, we help you to get insights on your Sage data and make Sage work better for in decision making.
